

## Informations about the Internship

Before the final exam - after the sixth semesters - students have to apply for an internship at a company. During the internship students have to do a work which is related to civil engineering. Internship can be used to gain some experience in a working environment. It is also important since during the internship a student can determine whether a particular job is suitable for him/her or not. Some students may make such a good connection with a company that they remain at the company as a permanent worker.

Minimum period of the internship is: **6 weeks**

A Cooperation Agreement must be signed by the company and the university. Please use the attached cooperation agreement.

At the end of the internship the following items must be submitted to the university (Department of Civil Engineering office B313). **Deadline is 1st of October 2019.**

- **Cooperation Agreement**
- **Working diary - This is a self prepared printed document, which details the kind of work that the student has done at the company.**
- **Certificate of completion of the internship**
