

### General Information:

<b>Name of Course:</b>	<b>DATABASE SYSTEMS</b>
<b>Course Code:</b>	PMTRTNM056OA
<b>Semester:</b>	1 <sup>th</sup>
<b>Number of Credits:</b>	2
<b>Allotment of Hours per Week:</b>	2 Lectures /Week
<b>Evaluation:</b>	Signature (with grade)
<b>Prerequisites:</b>	-

**Instructors:** **Dr Etelka SZENDRŐI, associate professor**  
Office: 7624 Hungary, Pécs, Boszorkány u. 2. Office N° B-143  
E-mail: [szendroi@pmmik.pte.hu](mailto:szendroi@pmmik.pte.hu)  
Office Phone: +36 72 503650 /23639

### Introduction, Learning Outcomes:

The students of Engineering are often required to deal with the huge amount of data. The students are expected to be aware of management of the data and its retrieval whenever need arises. This course concerns with the management of information and how to model it in structured manner. The use of database management, as an application tool to manipulate the information which has been modelled earlier, will provide the students a further step in order to apply an application of information technology in solving the problems of diverse spectrums of the field of Engineering.

The Database Systems course provides the students with an introduction to the core concepts in databases. It is centered around the core skills of identifying organizational information requirements, modeling them using conceptual data modeling techniques, converting the conceptual data models into relational data models and verifying its structural characteristics with normalization techniques. The subject includes database building practice in MSACCESS, and creating forms and reports.

### General Course Description and Main Content:

Students will learn to

1. Understand the role of databases and database management systems in managing organizational data and information.
2. Understand the historical development of database management systems and logical data models.
3. Understand the basics of how data is physically stored and accessed.
4. Use at least one conceptual data modeling technique (such as entity-relationship modeling) to capture the information requirements for an enterprise domain.
5. Design high-quality relational databases.
6. Understand the purpose and principles of normalizing a relational database structure.
7. Design a relational database so that it is at least in 3NF.
8. Implement a relational database design using an industrial-strength database management system, including the principles of data type selection and indexing.
9. Use the data definition, data manipulation, and data control language components of SQL in the context of one widely used implementation of the language.
10. Apply Graphical User Interface techniques for retrieve the information from database

### Methodology:

The course is based on classroom lectures, discussions, demonstrations and individual work of students.

### Schedule:

The rough outline of the schedule is as follows:

Week 1-3: Introducing Database Concepts.

- What is a database? What is DBMS? DBMS system architecture

- Entity-Relationship (ER) Data Model
- Relational Data Model

Week 4-7

- Mapping ER model to the Relational Model
- Functional Dependency
- Normal Forms

Week 8: **Midterm Exam**

Week 9: **Autumn holiday**

Week 10-14: Practice of Database manipulation

- Create database in MSAccess
- Create Tables, Forms and Reports

Week 15: **Final Exam**

### Attendance:

Attending is required all classes, and will impact the grade (max. 10%). Unexcused absences will adversely affect the grade, and in case of absence from more than 30% of the total number of lesson will be grounds for failing the class. To be in class at the beginning time and stay until the scheduled end of the lesson is required, tardiness of more than 20 minutes will be counted as an absence. In the case of an illness or family emergency, the student must present a valid excuse, such as a doctor's note.

### Evaluation + Grading

The Course grade is determined as a combination of 1 midterm exam (40%), a final exam (40%) and attendance of lessons (10%).

1. All exams are closed-book and closed-notes. A student with a proper excuse of being absent from the examination must inform and get a permission from the teacher prior to the time of examination. Any students who do not take the examination at the scheduled time will receive a zero score.

Grading Scale:

Numeric Grade:	5	4	3	2	1
Evaluation in points:	89%-100%	77%-88%	66%-76%	55%-65%	0-54%

Course grade (exams) correction between: 19-22th December, 2016

### Students with Special Needs:

Students with a disability and needs to request special accommodations, please, notify the Deans Office. Proper documentation of disability will be required. All attempts to provide an equal learning environment for all will be made.
