

SUBJECT DETAILS AND SYLLABUS
2019/2020. II. SEMESTER

<i>Subject name</i>	<i>Computer Networks 2.</i>
<i>Subject code</i>	IVB371ANVM
<i>Classes per week: L/P/Lab</i>	2/0/2
<i>Number of Credits</i>	4
<i>Division/ type</i>	Electrical Engineering (BSc) / mandatory
<i>Program</i>	full time
<i>Requirement type</i>	grade
<i>Semester</i>	6.
<i>Preliminary requirements</i>	Computer Networks 1.
<i>Organization name</i>	Department of Automation
<i>Responsible Lecturer(s)</i>	Peter Megyeri

GOAL OF INSTRUCTION

The course introduces to students to the structure, characteristics and selection aspects of computer networks and network active devices, which occur in engineering practice. It introduces the computer network standards, the basics of active device configuration and network planning. By completing the course, students will acquire proficiency in designing the network solutions used in different companies, and configuration possibilities of network active devices. Outlines practical applications of computer networks and the links to other areas of expertise.

SUBJECT CONTENT

Brief Syllabus:

Schedule:

Lecture:

1. Segmentation of Networks. Hardware, software architecture, and features of the Switches.
2. Switching theory. Operating modes of switches.
3. Spanning Tree Protocol. Avoiding loops in data transmission.
4. Concept and design aspects of VLANs. Static and dynamic VLANs.
5. The concept and standardized solutions of tagging.
6. Trunking of VLANs. Introduction and features of trunking protocols.
7. Connecting of VLANs. The concept of native VLAN, its application in network data transmission.
8. Interconnection of networks. Hardware and software structure and features of the Routers.

9. The features of Router's LAN Interface. Concept, configuration and features of Subinterfaces.
10. Aspects of traffic filtering and network access development. Firewall types.
11. Traffic filtering with a Router. Standard and Extended Access Control Lists (ACLs).
12. Network Management. The SNMP protocol.
13. Telecommunication and WAN technologies.
14. Telecommunication networks and systems. WAN networks.

Practice/Labs:

1. Default settings and typical Configuration File structure of Switches.
2. VLANs, and ports configuration of Switches.
3. Principles of VLAN interconnection.
4. Configuration of Subinterfaces. Trunking configuration on the router.
5. Operation checking and troubleshooting of switches.
6. Principles and aspects of ACL design.
7. Basics of Network Security. Configuration and positioning of ACLs.
8. Analysis of practical running configuration files of routers and switches.
9. Aspects of development of Network management. Configuration of SNMP protocol.
10. Features and configuration of xDSL, Frame Relay and ISDN interface.
11. Features and configuration of T1, E1 interfaces.
12. The structure and characteristics of COs and PBXs.
13. The characteristics of different traffic types. The aspects of shaping of network configuration and bandwidth.
14. Demonstration of the configuration of other types of traffic, through practical examples.

EXAMINATION AND EVALUATION SYSTEM

Attendance:

Regarding participation in exercises and lectures, appropriate points of TVSz. are authoritative. According to this, the student cannot obtain the credit point of the subject, if the absence of the relevant classes exceeds 30% of the total number of practices or lectures.

Criterion of Signature / Semester rating:

Forms of controlling under the semester: written exams, and homework. During the semester, students write two exams, which are written on practice. The topic of the exams is the material of the practices and lectures given till a given week. The exact time of the exams will be announced in the given classes of the subject. The homework will be released on practice, at the latest until the 10th week. The condition for obtaining the signature is to write the exams and to submit an acceptable homework during the semester.

Exam:

Written exam, minimum of 51 % is required to pass.

Grading:

The written and the practical exams are evaluated with grades. The weighting used to create

the semester rating:

- Homework: 33 %.
- Average of written exams: 33 %
- Written exam in the exam period: 33 %.

Grading scale:

Numeric Grade	5	4	3	2	1
Evaluation interval:	90–100%	76–89%	63–75%	51–62%	0–50%

Consultation options:

At the time agreed in advance with the responsible instructor.
