

Tárgytematika

Félév: 2022/23/1

Tárgynév: Computer Networks 1.

Tárgykód: IVB370ANVM

Felelős szervezet neve:	Informatika és Villamos Intézet
Felelős szervezet kódja:	MIK-IV
Tárgyfelelős neve:	Megyeri Péter
Tárgy követelménye:	Vizsga
Tárgy heti óraszám:	2/0/0/2
Tárgy féléves óraszám:	10/0/0/10

Oktatás célja:

The course introduces to students to the structure, characteristics and selection aspects of computer networks and network active devices, which occur in engineering practice. It introduces the computer networking standards, the basics of router configuration and network planning. Outlines practical applications of computer networks and the connections to other areas of expertise. By completing the course, students will acquire proficiency in the operation of IP-based communication, the design of IP networks, and the operation and configuration of routing and the IP protocols. They will also learn the basics of QoS and how it works.

Tantárgy tartalma:

Lecture:

1. IP addressing – IPv4.
2. IP addressing – IPv6.
3. Network topologies (LAN és WAN).
4. Network interface cards: NIC (architecture, features, typical interfaces, speeds).
5. Network segmentation. (L2, L3). Subnetting, VLAN.
6. Interconnection of networks. Supernetting. ACL. Hardware and software structure and characteristics of routers.
7. Routing. General characteristics of routing protocols (static, dynamic; external, internal). Redundancy protocols.
8. General characteristics of distance-based dynamic routing protocols, RIP (versions: v2, nG).
9. General characteristics of EIGRP.
10. General characteristics of link-state based routing protocols, OSPF (versions).
11. External routing protocols, general characteristics of autonomous systems (AS, basics of BGP).
12. Basics of Juniper devices – interface configuration, static routing.
13. Juniper – dynamic routing protocols in JunOS (OSPF, BGP), routing rules, firewall filters.
14. QoS (Cisco, Juniper).

Practice/Labs:

1. IPv4-es addressing.
2. IPv6-os addressing.
3. Typical hardware and software architecture of network active devices. (NAT).
4. Configuration and features of operation of network interfaces.
5. Segmentation with switches and routers.
6. Turning on routers, and interfaces set up.

Tárgytematika

Félév: 2022/23/1

Tárgynév: Computer Networks 1.

Tárgykód: IVB370ANVM

Tantárgy tartalma:

7. CISCO: Monitoring of routing table, static paths configuration. Creation of HSRP configuration.
8. CISCO: Basic configuration of RIP.
9. CISCO: Basic configuration of EIGRP.
10. CISCO: Basic configuration of OSPF.
11. CISCO: Basic configuration of BGP.
12. JunOS: CLI, configuration of user modes, and interfaces, control of operation, creation of static paths.
13. JunOS: studying routing and forwarding table, establishing of OSPF / BGP connection, configure a routing rule.
14. Interpreting QoS configuration of a Cisco and a Juniper devices, testing their functionality, ACL.

Számonkérési és értékelési rendszere:

Attendance:

Regarding participation in exercises and lectures, appropriate points of TVSz. are authoritative. According to this, the student cannot obtain the credit point of the subject, if the absence of the relevant classes exceeds 30% of the total number of practices or lectures.

Criterion of Signiture / Semester rating:

Forms of controlling under the semester: written exam, homework, and project. During the semester, students write an exam, which is written on practice. The topic of the exam is the material of the practices and lectures given till a given week. The exact time of the exam will be announced in the given class of the subject. The topic of the project must be relevant to the subject, and must be agreed in advance with the lecturer of the subject. The homework will be released on practice, at the latest until the 10th week. The condition for obtaining the signature is to write the exam and to submit an acceptable (minimum grade 2) homework, and project during the semester. Besides these, the students must be present on more than 70% of contact classes and/or consultations. Having more than 30% absence results in signature refusal.

Exam:

Written exam, minimum of 51% is required to pass.

Grading:

The written and the practical exams are evaluated with grades. The weighting used to create the semester rating:

Tárgytematika

Félév: 2022/23/1

Tárgynév: Computer Networks 1.

Tárgykód: IVB370ANVM

Számonkérési és értékelési rendszere:

- Homework: 20 %,
- Written exams: 40 %,

- Project: 40 %.

- Written exam in the exam period: 50 %.

Grading scale:

Numeric Grade	5	4	3	2	1
Evaluation interval:	90–100%	76–89%	63–75%	51–62%	0–50%

Failing the requirements:

The Code of Studies and Examinations of the University of Pécs is applicable in general.

- Students have one midterm test retake opportunity before the exam period.
 - Schedule: 15th week's lecture
 - Format: same as the test
- Students without signature have one opportunity to earn a passing midterm grade and signature in the exam period.
 - Schedule: 1st week of the exam period, lecture time
 - Format: written test and a new homework with oral presentation

Consultation options:

At the time agreed in advance with the responsible instructor.
