Introduction, Learning Outcomes

The course focuses on the concept of “quality” and the way it appears concerning products and services. Highlighted topics are:

- The system of quality management quality assurance as an approach
- Subjects of quality management systems
- Optimization of the allocation of organizational resources and the improvement of relevant processes
- Methodology of measuring quality
- Quality assurance standards and the harmonization of EU guidelines
- Quality assurance documentation
- Quality management model as a whole

General Course Description and Main Content:

The purpose of the class is to introduce the way quality oriented approach should be implemented in engineering practice; the way quality, quality assurance and quality management appears in technical development processes and in the general technological fields; how non-special innovative developing projects can be supported via professional quality-centered practices.

Methodology:

The presentations give an introduction to the above mentioned topics. Tutorials will cover some practice of the topic and some additional practical topics.

Assignments and requirements will be handed out according to the topic, which will be uploaded to the course's **Neptun Meet Street / MS Teams** platform along with the lecture materials and aids. Information related to the subject is also available on these platforms.
