**COURSE DESCRIPTION**

This course exposes students to an expansive suite of topics and methods within the field of water resources engineering, emphasizes engineering applications of Fluid Mechanics.

**SYLLABUS**

**1. GOALS AND OBJECTIVES**

Fluid Mechanics is explores using fundamental conservation laws and ecologically-based design theory. Concept of this course is to learn about the flow of the Fluid, Types of flow in both Channels and Pipes, Pumps, Runoff, Flood, Infiltration, Groundwater Flow and more.

**2. COURSE CONTENT**

| TOPICS   |                                                                                                                                                                             |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LECTURE  | 1. Types of Flow<br>2. Types of Fluids & Bernoulli's Equation<br>3. Pipe Flow, Siphons, Pumps<br>4. Channel Flow                                                            |
| PRACTICE | 1. Examples about Finding Flow Discharge<br>2. Examples about Bernoulli's Equation<br>3. Examples about Flow in Pipes, Siphons, Pumps<br>4. Examples about Flow in Channels |

**DETAILED SYLLABUS AND COURSE SCHEDULE**

**LECTURE**

| week | Topic                                 | Compulsory reading; page number | Required tasks (assignments, tests, etc.) | Completion date, due date |
|------|---------------------------------------|---------------------------------|-------------------------------------------|---------------------------|
| 7.   | Holiday - no classes                  | [1.]                            |                                           |                           |
| 8.   | Holiday - no classes                  |                                 |                                           |                           |
| 9.   | Flow Types and Finding flow discharge | [1.]                            |                                           |                           |
| 10.  | Bernoulli's Equation, EGL & HGL       | [1.]                            |                                           |                           |
| 11.  | Flow in Pumps and Siphons             | [1.]                            |                                           |                           |

|     |                  |      |           |            |
|-----|------------------|------|-----------|------------|
| 12. | Flow in Channels | [1.] |           |            |
| 13. | Exam test        |      | Exam test | 03.12.2025 |
| 14. | Retake exam test |      |           |            |

## PRACTICE

| week | Topic                                                                        | Compulsory reading; page number | Required tasks (assignments, tests, etc.) | Completion date, due date |
|------|------------------------------------------------------------------------------|---------------------------------|-------------------------------------------|---------------------------|
| 7.   | Holiday – no classes                                                         | [1.]                            |                                           |                           |
| 8.   | Holiday – no classes                                                         | [1.]                            |                                           |                           |
| 9.   | Flow Types and Finding flow discharge in practice + examples                 |                                 |                                           |                           |
| 10.  | Bernoulli's Equation in practice + examples EGL & HGL in practice + examples | [1.]                            | Homework 1                                | 19.11.2025                |
| 11.  | Flow in Pumps and Siphons in practice + examples                             | [1.]                            | Homework 2                                | 26.11.2025                |
| 12.  | Flow in Channels in practice + examples                                      | [1.]                            | Homework 3                                | 03.12.2025                |
| 13.  | Practice Exam                                                                |                                 | Practice Exam                             | 03.12.2025                |
| 14.  | Retake practice exam                                                         |                                 |                                           | 10.12.2025                |

## 3. ASSESSMENT AND EVALUATION

### ATTENDANCE

In accordance with the Code of Studies and Examinations of the University of Pécs, Article 45 (2) and Annex 9. (Article 3) a student may be refused a grade or qualification in the given full-time course if the number of class absences exceeds 30% of the contact hours stipulated in the course description.

### Method for monitoring attendance

Attendance sheet. Attendance Sheet will be filled during the Semester. Attending is required all classes, and will impact the grade (max. 10%). Unexcused absences will adversely affect the grade, and in case of absence from more than 30% of the total number of lesson will be grounds for failing the class. To be in class at the beginning time and stay until the scheduled end of the lesson is required, tardiness of more than 20 minutes will be counted as an absence. In the case of an illness or family emergency, the student must present a valid excuse, such as a doctor's note.

### ASSESSMENT

#### Course-unit with final examination

**Mid-term assessments, performance evaluation and their weighting as a pre-requisite for taking the final exam**

| Type             | Assessment                           | Ratio in the final grade |
|------------------|--------------------------------------|--------------------------|
| Homeworks        | 10%(min 4%) -10%(min 4%)-10%(min 4%) | 30%                      |
| Examtest         | 30% (min 12%)                        | 30%                      |
| Practice Exam    | 30% (min 12%)                        | 30%                      |
| Class attendance | 10% (min 4%)                         | 10%                      |

#### Requirements for the end-of-semester signature

Each individual assessment must be at least 40% on its own.

#### Re-takes for the end-of-semester signature (PTE TVSz 50§(2))

The specific regulations for grade betterment and re-take must be read and applied according to the general Code of Studies and Examinations

Examtest and Practice exam can be repeated/improved each at least once every semester.

**Type of examination:** written exam test

**The exam is successful if the result is minimum 40 %**

**Calculation of the grade** (TVSz 47§ (3))

**Calculation of the final grade based on aggregate performance in percentage.**

| Course grade     | Performance in % |
|------------------|------------------|
| excellent (5)    | 85 % - 100%      |
| good (4)         | 70 % - 84 %      |
| satisfactory (3) | 55 % - 69 %      |
| pass (2)         | 40 % - 54 %      |
| fail (1)         | 0% - 39 %        |

#### 4. SPECIFIED LITERATURE

##### COMPULSORY READING AND AVAILABILITY

[1.] Lecture notes ppt.

##### RECOMMENDED LITERATURE AND AVAILABILITY

[2.] Fluid Mechanics: Fundamentals & Applications, Fourth Edition by John M. Cimbala

[3.] 1000 Solved Problems in Fluid Mechanics by K Subramanya

[4.] Fluid Mechanics (SIE) by Frank White
